SUMMARY

Full-stack developer and AI enthusiast skilled in Generative AI, Agentic AI, LLM-powered applications, real-time event-driven systems, with strong software engineering and problem-solving fundamentals.

EXPERIENCE

Cybersecurity Research Intern Jun 2025 – Sep 2025
University College Cork Cork, Ireland

- Developed a Flask web application for medical image decoding and secure data handling, processing large volumes of medical images.
- Implemented AES and RSA encryption/decryption algorithms to protect sensitive patient data, and simulated third-party access scenarios to identify and mitigate security vulnerabilities.

Software Development Intern Sep 2024 – Apr 2025
KATSI Canada Toronto, Canada

- Co-developed an OFAC List Checking web application as a Backend Developer using PHP, contributing to sanctions screening and compliance workflows.
- Designed Use Case and Activity Diagrams using Visual Paradigm, created UI designs in Figma, performed manual testing with self-written test cases.

SKILLS

Languages: Java, JavaScript, PHP
Frontend: HTML, CSS, React, Tailwind CSS
Backend: Node.js, Flask, Express.js, REST APIs
Databases & Caching: MongoDB, MySQL, Redis
Generative AI & Automation: LLMs, OpenAI API, RAG, AI Agents, n8n
DevOps & Cloud: Docker, Kubernetes, Jenkins, CI/CD, Vercel
Monitoring: Prometheus, Grafana
Tools: Git & GitHub

PROJECTS

BiteDash – GenAI-Powered Food Marketplace & Delivery Platform Live Demo — GitHub
Tech Stack: React, Node.js, Express.js, MongoDB, Razorpay, OpenAI API, Vercel

- Engineered dynamic ETA and reliability scoring using preparation history, kitchen load, delivery distance, rider status, and order lifecycle stages for real-time predictions.
- Built a secure GenAI support assistant using OpenAI Function Calling with authenticated tools for order history, status, details, and ETA, with deterministic fallbacks.
- Developed geospatial surplus-food discovery using MongoDB GeoJSON and TTL indexes with atomic inventory updates; integrated Redis and Socket.io for realtime updates.
- Implemented rider route batching and demand forecasting using proximity, order readiness, delay constraints, and 30 days of order history to optimize deliveries.

Drivo — AI-Driven Smart Ride-Hailing Platform Live Demo — GitHub
Tech Stack: React, Node.js, Express.js, MongoDB, OpenAI API, Vercel

- Built a ride-hailing platform with rider, driver, and admin roles, using a smart driver-matching algorithm based on distance, rating, acceptance rate, and cancellation history.
- Developed demand prediction and driver repositioning using historical patterns to identify hotspots (e.g., higher Friday fuel-station demand) and guide idle drivers 1–2 km toward demand zones.
- Engineered a traffic-aware ETA engine using time-based congestion patterns and trip context, along with anomaly detection for impossible GPS jumps and unrealistic driving speeds.
- Built a GenAI customer-support assistant grounded in live trip, billing, and demand data to explain surge charges, verify ride details, answer queries, and provide real-time support.

ACHIEVEMENTS

- 1st Place – AIU Anveshan 2025–26, representing Shoolini University (Arunachal Pradesh).
- Winner – Signifiya Hackathon (Adamas University) 2026.
- 1st Place – Swami Vivekananda District Chess Championship (Bengal Chess Association).
- Solved 460+ problems on LeetCode.

EDUCATION

Adamas University 2022 – 2026
B.Tech in Computer Science Engineering
Mount Litera Zee School – Higher Secondary (CBSE) 2022
Egra Public School – Secondary (ICSE) 2020
